

Onboarding Diary Application - Requirements

Overview

A web application for new recruits to document their onboarding journey. Users log daily tasks, record issues, provide feedback, and capture notes. Managers can view entries and generate downloadable reports.

User Roles

- **New Recruit** - Logs tasks, issues, feedback, and notes
- **Manager** - Views recruit entries and generates reports
- **Admin** - Manages users and views all data

Features

Authentication

- Sign up / login with email and password
- User profile (name, role, department, start date)

Task Log

- Create, edit, and delete task entries
- Fields: date, title, description, category, status, priority
- Filter by date, category, or status

Issue Log

- Log issues or blockers encountered
- Fields: date, title, description, severity, status, resolution notes
- Filter by status or severity

Feedback Notes

- Submit feedback about the onboarding process
- Fields: date, subject, type (Positive / Suggestion / Concern), details

Additional Notes

- Free-form notes section with date, title, content, and tags

Dashboard

- Summary counts and recent entries across all categories
- Task completion progress and open issues at a glance

Reports

- Generate reports by date range (tasks, issues, feedback, or combined)
- Download as PDF or CSV
- Managers can generate reports for recruits they oversee

Technical Notes

- Web application (responsive)
 - Tech stack is candidate's choice
 - Data should be persisted in a database
-

Exercise Instructions

This is a greenfield project. There is no existing codebase.

Step 1 - Elaborate the Requirements Use Devin to expand this document into detailed requirements — add user stories, define API endpoints, describe UI flows, specify validation rules, and suggest any additional features you think would improve the app.

Step 2 - Build the Application Work with Devin to build the application incrementally using your elaborated requirements.

Step 3 - Extend Once the core app is working, collaborate with Devin to add at least two new features of your choice (e.g., search, charts, manager dashboards, onboarding checklists).
